Tissue Engineering: Fundamentals and Applications (Interface Science and Technology)

Yoshito Ikada

Tissue Engineering: Fundamentals and Applications (Interface Science and Technology) Yoshito Ikada
Tissue engineering is an emerging interdisciplinary field, occupying a major position in the regenerative medicine that aims at restoring lost or damaged tissues and organs with use of cells. Regenerative medicine includes cellular therapy and tissue engineering. In general, the former treats patients by cell infusion alone, while tissue engineering needs biomaterials and growth factors in addition to cells. Biomaterials function in tissue engineering as the scaffold or template for cells to proliferate, differentiate, and produce matrices. This book focuses on the fundamentals (biomaterials, scaffolds, cell cultures, bioreactors, animal models etc.), recent animal and human trials, and future prospects regarding tissue engineering.

Almost twenty years have passed since the advent of the tissue engineering, which uses cells, scaffolds, and growth factors for regeneration of neotissues. The number of investigations on tissue engineering is still increasing tremendously. Nevertheless, it seems likely that the number of reports describing clinical trials of tissue engineering will remain very limited. Even the studies that apply tissue engineering research to large animals have not been performed yet on a large scale. The major objective of this book is to address this question from a science and technology point of view, and to describe the principles of basic technologies that have currently been developed by numerous research groups.

- * Helps reader understand the key issues required for promotion of clinical trials in tissue engineering
- * Covers in full the issues related to tissue engineering
- * Looking at current technologies in the field

From reader reviews:

Clifford Walsh:

As people who live in often the modest era should be change about what going on or facts even knowledge to make them keep up with the era which can be always change and advance. Some of you maybe will update themselves by looking at books. It is a good choice for you personally but the problems coming to anyone is you don't know which you should start with. This Tissue Engineering: Fundamentals and Applications (Interface Science and Technology) is our recommendation so you keep up with the world. Why, since this book serves what you want and need in this era.

Jacqueline Kellett:

Information is provisions for individuals to get better life, information today can get by anyone on everywhere. The information can be a information or any news even an issue. What people must be consider if those information which is inside the former life are hard to be find than now's taking seriously which one is suitable to believe or which one the particular resource are convinced. If you find the unstable resource then you understand it as your main information it will have huge disadvantage for you. All those possibilities will not happen throughout you if you take Tissue Engineering: Fundamentals and Applications (Interface Science and Technology) as your daily resource information.

Clarice Stephens:

The particular book Tissue Engineering: Fundamentals and Applications (Interface Science and Technology) has a lot details on it. So when you check out this book you can get a lot of benefit. The book was written by the very famous author. The author makes some research just before write this book. This kind of book very easy to read you can obtain the point easily after reading this article book.

Blanche Jackson:

Are you kind of busy person, only have 10 or perhaps 15 minute in your day to upgrading your mind talent or thinking skill actually analytical thinking? Then you are receiving problem with the book in comparison with can satisfy your short time to read it because all of this time you only find book that need more time to be go through. Tissue Engineering: Fundamentals and Applications (Interface Science and Technology) can be your answer because it can be read by you actually who have those short extra time problems.
