The Gecko's Foot: How Scientists are Taking a Leaf from Nature's Book Peter Forbes

A cutting-edge science book in the style of 'Fermat's Last Theorem' and 'Chaos' from an exciting and accessible voice in popular science writing.

Bio-inspiration is a form of engineering but not in the conventional sense. Extending beyond our established and preconceived notions, scientists, architects and engineers are looking at imitating nature by manufacturing 'wet' materials such as spider silk or the surface of the gecko's foot.

The amazing power of the gecko's foot has long been known – it can climb a vertical glass wall and even walk upside down on the ceiling – but no ideas could be harnessed from it because its mechanism could not be seen with the power of optical microscopes. Recently however the secret was solved by a team of scientists in Oregon who established that the mechanism really is dry, and that it does not involve suction, capillary action or anything else the lay person might imagine. Each foot has half a million bristles and each bristle ramifies into hundreds of finer spatula-shaped projections. The fine scale of the gecko's foot is beyond the capacity of conventional microengineering, but a team of nanotechnologists have already made a good initial approximation.

The gecko's foot is just one of many examples of this new 'smart' science. We also discover, amongst other things, how George de Mestral's brush with the spiny fruits of the cocklebur inspired him to invent Velcro; how the shape of leaves opening from a bud has inspired the design of solar-powered satellites; and the parallels between cantilever bridges and the spines of large mammals such as the bison.

The new 'smart' science of Bio-inspiration is going to produce a plethora of products over the next decades that will transform our lives, and force us to look at the world in a completely new way. It is science we will be reading about in our papers very soon; it is the science of tomorrow's world.

From reader reviews:

Nancy Sanchez:

Book is to be different per grade. Book for children until finally adult are different content. As it is known to us that book is very important for us. The book The Gecko's Foot: How Scientists are Taking a Leaf from Nature's Book has been making you to know about other understanding and of course you can take more information. It is very advantages for you. The book The Gecko's Foot: How Scientists are Taking a Leaf from Nature's Book is not only giving you considerably more new information but also to get your friend when you feel bored. You can spend your own personal spend time to read your book. Try to make relationship with all the book The Gecko's Foot: How Scientists are Taking a Leaf from Nature's Book. You never experience lose out for everything when you read some books.

Francine Nott:

The particular book The Gecko's Foot: How Scientists are Taking a Leaf from Nature's Book will bring that you the new experience of reading any book. The author style to describe the idea is very unique. In the event you try to find new book to read, this book very suited to you. The book The Gecko's Foot: How Scientists are Taking a Leaf from Nature's Book is much recommended to you to study. You can also get the e-book from the official web site, so you can easier to read the book.

Rigoberto Adams:

This The Gecko's Foot: How Scientists are Taking a Leaf from Nature's Book is great e-book for you because the content which is full of information for you who also always deal with world and also have to make decision every minute. That book reveal it data accurately using great coordinate word or we can say no rambling sentences included. So if you are read that hurriedly you can have whole facts in it. Doesn't mean it only provides you with straight forward sentences but difficult core information with attractive delivering sentences. Having The Gecko's Foot: How Scientists are Taking a Leaf from Nature's Book in your hand like obtaining the world in your arm, data in it is not ridiculous one particular. We can say that no guide that offer you world inside ten or fifteen moment right but this guide already do that. So , this is good reading book. Hey Mr. and Mrs. stressful do you still doubt this?

Edward Trotta:

That publication can make you to feel relax. This kind of book The Gecko's Foot: How Scientists are Taking a Leaf from Nature's Book was multi-colored and of course has pictures around. As we know that book The Gecko's Foot: How Scientists are Taking a Leaf from Nature's Book has many kinds or variety. Start from kids until teenagers. For example Naruto or Private investigator Conan you can read and believe that you are the character on there. Therefore not at all of book are make you bored, any it makes you feel happy, fun and rest. Try to choose the best book to suit your needs and try to like reading that will.
