We often enjoy the benefits of connecting with nearby, domesticated nature -- a city park, a backyard garden. But this book makes the provocative case for the necessity of connecting with wild nature -- untamed, unmanaged, not encompassed, self-organizing, and unencumbered and unmediated by technological artifice. We can love the wild. We can fear it. We are strengthened and nurtured by it. As a species, we came of age in a natural world far wilder than today's, and much of the need for wildness still exists within us, body and mind. *The Rediscovery of the Wild* considers ways to engage with the wild, protect it, and recover it -- for our psychological and physical well-being and to flourish as a species. The contributors offer a range of perspectives on the wild, discussing such topics as the evolutionary underpinnings of our need for the wild; the wild within, including the primal passions of sexuality and aggression; birding as a portal to wildness; children's fascination with wild animals; wildness and psychological healing; the shifting baseline of what we consider wild; and the true work of conservation.
