Biocommunication of Animals

Biocommunication of Animals

Every coordination within or between animals depends on communication processes. Although the signaling molecules, vocal and tactile signs, gestures and its combinations differ throughout all species according their evolutionary origins and variety of adaptation processes, certain levels of biocommunication can be found in all animal species:

- (a) Abiotic environmental indices such as temperature, light, water, etc. that affect the local ecosphere of an organism and are sensed, interpreted.
- (b) Trans-specific communication with non-related organisms.
- (c) Species-specific communication between same or related species.
- (d) Intraorganismic communication, i.e., sign-mediated coordination within the body of the organism.

This book gives an overview of the manifold levels of animal communication exemplified by a variety of species and thereby broadens the understanding of these organisms.
